### Minibar cooler with an exceptional low energy consump

This compressor operated minibar with a solid door is an excellent choice for hotels in warmer surroundings. The cooling system helps secure a lower temperature level as well as a shorter pull-down time compared to absorption operated minibars. It also has some cool programming features. It can be timed, so the compressor only runs when the room is highly likely to be empty, e.g. from 9-12 am and 6-9 pm. This means it is completely silent at other times, when guests are likely in the room. A so-called water-pack maintains the cold temperature in the minibar, when it is running. It also features a SLEEP-mode for forced silence as well as a FAST-cool function for immediate cooling. This is very handy if guests arrive at an odd hour. The minibar is designed to be elegantly discreet with a black exterior. It can also be fully built in with a build-in bracket and hinge fixation kit, which allows a joint opening of the cupboard- and minibar door (available as accessory). A hinge fixation kit also secures the stability of the cooler and prevents it from tipping and sliding forward.
