Subject: Confirmation Letter for NM Hyper Clamp

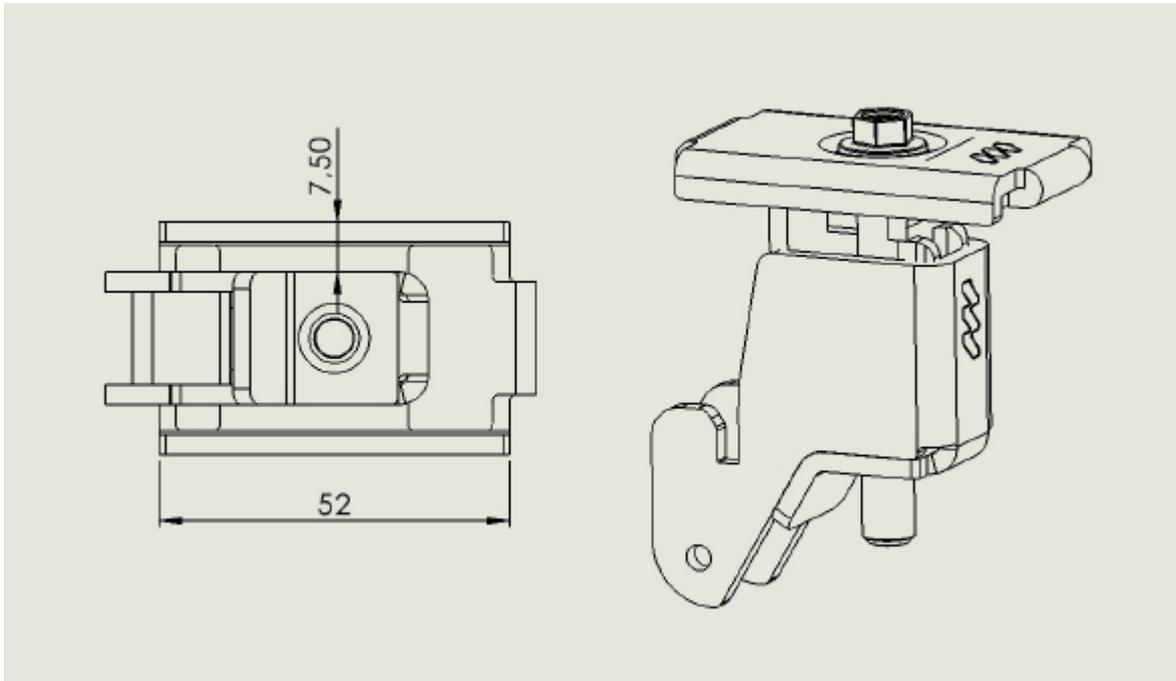

Date: 06.02.2026

We, JA Solar Technology Co., Ltd. (“JA Solar”), hereby confirm that our photovoltaic modules are manufactured in compliance with relevant international standards, including IEC 61215 and IEC 61730, which define the requirements for photovoltaic modules.

JA Solar installation manuals specify approved mounting methods and boundary conditions for the installation of JA Solar modules. Based on the information provided, we confirm that the mounting configuration using the Hyper Clamp is considered acceptable, provided that the installation is carried out in accordance with JA Solar’s official installation manual and the clamp manufacturer’s specifications.

The overall system design, structural calculations, and verification of mechanical loads must comply with applicable local electrical, building, and safety regulations. System designers, EPCs, and installers remain solely responsible for ensuring the correct mechanical design of the support structure, including load calculations, clamp positioning, torque settings, and grounding where applicable.

JA Solar shall not be held responsible for any damage, defects, or performance issues arising from improper system design, incorrect installation, non-compliance with installation guidelines, or deficiencies related to the mounting structure or clamping components.
